

## NEURO GUESS

### ACTIVITY SPECIFICS:

**Tool type:** Social Activity

**Our inspiration:** [Heads Up](#)

**Format:** Offline

**Time needed:** 20 min

### SET-UP

12 x SLD [cards](#)

**Number of participants:** 2 - 12

**Focus (SLD topic)**

Inclusive communication

### ACTIVITY OVERVIEW

In this “Heads Up” style activity, players place an SLD card on their head without seeing it and ask questions to guess which learning disorder they have. The game encourages discussion and helps raise awareness about Specific Learning Disorders in a fun and engaging way.

### INSTRUCTIONS / STEPS

All participants draw one card and place it on their head without looking at it. Starting in clockwise order, each player can ask one question to try to figure out which SLD is written on their card. After asking their question, the turn passes to the next player.

The first player who correctly guesses the name of the SLD on their card wins the game. The activity ends as soon as one player successfully identifies their SLD.

## NEURO GUESS

Each player has a maximum of 5 questions before they must try to guess the disorder.

The players then shuffle the cards and draw another one to start another round.
